DETAILED ACTION

Response to Amendment

1. The supplemental amendment was filed on March 7, 2007.
2. Amendment to the specification with a minor change to the words "multi spectral" to "multi-spectral" is accepted.

Response to Arguments

3. Applicant's arguments, see page 11 of Remarks, filed on March 7, 2007 have been fully considered and are persuasive.

Allowable Subject Matter

4. Claims 3-7 and 10 are allowed, renumbered as 1-6.
5. The following is an examiner's statement of reasons for allowance:

The instant invention defines an image processing apparatus and a method as disclosed in claims 3 and 10. The claimed invention distinguishes over the prior art by the manner in which the plurality of bands into which a total wavelength region is divided. The claimed combination allows for improving a method of image processing. Image processing is conventional in the art. However, the prior art of record fails to teach a first acquisition section, arranged to acquire color data of an object; a second acquisition section, arranged to acquire second spectral distribution data of the object, which represents a portion of a plurality of bands into which a total wavelength region is divided, and which is necessary to estimate spectral distribution data of the total wavelength region, from a plurality of first spectral distribution data in accordance with the acquired color data; and an estimator, arranged to estimate the spectral distribution data of the total wavelength region on the basis of the second spectral distribution data acquired by said second acquisition section. These elements in combination with all of the other elements of the claims are not taught or fairly suggested in the prior art of record. The dependent claims are allowed for the same reasons.
